EXPERIENCE

Founder & Software Engineer

November 2025 – Present

BuiltByGervonte LLC

Remote

- Founded Rainy Day, a deterministic-first financial intelligence platform for Caribbean consumers using bank statements as the primary data source.
- Built statement ingestion for 4 institutions, including CIBC Caribbean, Scotiabank Caribbean, Bank of The Bahamas, and Teachers & Salaried Workers Co-operative Credit Union, normalizing to a canonical transaction model.
- Designed a hybrid workflow that applies deterministic financial rules first, then constrained structured AI only for unresolved cases, keeping reviewable financial outputs.
- Benchmarked ~1,400 real transactions across four years of statements, raising deterministic suggestion coverage from ~70% to 80% and classified coverage to ~94% on unresolved cases.
- Reduced estimated manual review workload by ~50% through deterministic categorization, constrained AI recovery, and grouped review workflows.
- Used Langfuse trace-level analysis to catch a recurring-transaction grouping defect before production, cut review time, and raised categorization accuracy through retraced runs.
- Used PostHog funnel analytics to identify a profile-selection gate causing 44% drop-off before product entry; redesigned onboarding, raising first-time product entry to 97% and reaching 30% full app tour completion.
- Built Supabase/Postgres persistence with Row Level Security, transactional upload RPCs, statement hashing, parser validation, and overlap-safe deduplication.

Independent Software Development & Graduate Research

September 2022 – September 2025

Nassau, The Bahamas/ Lakeland, FL

- Co-authored IEEE publication evaluating 20+ large language models for Agile user-story generation and story-point estimation across a 40,014-story dataset.
- Compared model performance across accuracy, cost efficiency, latency, and stability to produce deployment recommendations for production environments.

Full Stack Software Engineer

August 2020 – June 2022

Nova Credit

San Francisco, CA

- Engineered Public API features that expanded Credit Passport® for international partners, tying cross-border credit access to HSBC's global partnership and \$10M investment.
- Owned Public API integration work for the Philippines, Kenya, and Dominican Republic within a 13-country rollout, improving partner integration consistency.
- Built secure REST API workflows using TypeScript, Node.js, React, and PostgreSQL to expose real-time international credit data through developer endpoints.
- Implemented bureau-specific retry logic across supported markets, defining expected behavior and validating flows through integration testing.

EDUCATION

Florida Polytechnic University

Lakeland, FL

M.S. Computer Science

Summer 2025

Florida Polytechnic University

Lakeland, FL

B.S. Computer Science

Spring 2020 / GPA 3.54

TECHNICAL SKILLS

Languages & Tools: TypeScript, JavaScript (React, Next.js, Node.js), Python, HTML, CSS, PostgreSQL, Supabase, AWS, REST APIs, Git, GitHub Actions, Playwright

Data & Infrastructure: API development, API integration, Supabase auth/storage, Row Level Security, CI/CD pipelines, automated testing, Docker, Sentry, PostHog, Linear, Mintlify, MCP workflows, Langfuse
